## **TECHNICAL DATA SHEET, CHA-210 SERIES**

### 1. INTRODUCTION

The Seal-Pack Heat Seal Activated Cover Tape is manufactured using Antistatic Polyethylene Terephthalate Film and other proprietary adhesive materials. The components for it's anti-static properties is from high polymers that eliminates the use of metallic elements. The seal strength between Seal-Pack Cover Tape and Carrier Tape remains consistent even after a long term and challenging storage conditions, and CHA-210 series is designed for all Carrier Tape materials such as PP, PS and PC sheets.

### 4. P.O.S RESPONSE TREND BY TEMPERATURE AND PRESSURE

#### **Test Condition**

Environment : Normal production environment

P.O.S Testing Machine : Systemation TP150

Test Strip Length: 12 in.

Machine Setting: Speed: 300mm/min

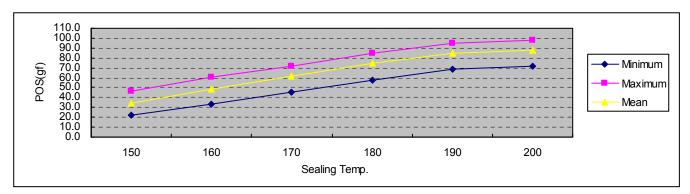

Sealing Mode : Stamping Sealing Pressure : 40 PSI

Test Vehicle: 16mm conductive PS carrier Tape

Sealing Machine: Systemation MT30

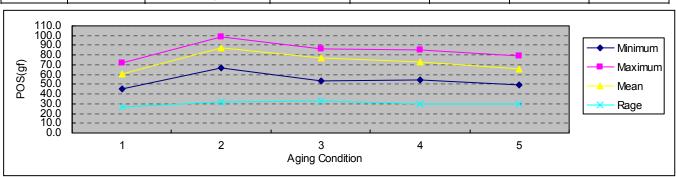

Seal Shoe Width: 18 mils

| Tape<br>Size | Sealing<br>Pressure<br>(PSI) | Sealing Temp.<br>(℃) | P.O.S |      |      |      |      |      |
|--------------|------------------------------|----------------------|-------|------|------|------|------|------|
|              |                              | Values               | 150   | 160  | 170  | 180  | 190  | 200  |

## 6. SHELF LIFE AND STORAGE CONDITIONS

CHEMINIX Seal-Pack Cover Tape has a shelf life of 2 years from the date of manufacture. The cover tape, however, has to be kept at recommended storage condition.

CHEMINIX recommends storing the product at an environment where the temperature is between 20 to 30  $^{\circ}$ C and relative humidity under 60%. It is best for the product to be kept in it's unopened container and to be opened only when ready to use.
